SAMUEL SUH

SOFTWARE ENGINEER

San Jose, CA • 408-206-3559 • suhvivor24@gmail.com • Portfolio • LinkedIn • GitHub

TECHNICAL SKILLS

Frontend: React, Redux, JavaScript (ES6+), HTML5, CSS3, Chart.js, Responsive Design, DOM Manipulation
Backend & Tools: Node.js, Express, Flask, PostgreSQL, REST APIs, AWS S3, Docker, Git, Playwright, Postman, Python, SQL
Testing & QA: Test Automation, Automated Test Maintenance, Chrome DevTools, Debugging, Failure Reproduction, Cross-browser Compatibility
Practices: Agile/SCRUM, SEO Optimization, Multi-CMS Management, Code Review, Mentorship | Fluent Korean

PROFESSIONAL EXPERIENCE

Junior Web Developer | Honest Digital | Remote Mar 2024 - Present

- Reduced 301/404 error resolution time by ~30% across 30+ client properties by identifying a systemic gap in redirect workflows and engineering a standardized debugging process adopted team-wide.
- Built and standardized a reusable library of HTML/CSS modules and page templates adopted across the team and deployed throughout the entire client base, enforcing UI consistency and cutting duplicate build time on new sites.
- Improved cross-browser compatibility and QA coverage for 30+ production sites by using Chrome DevTools to reproduce, isolate, and resolve failures before deployment, reducing client-reported UI regressions.
- Made deliberate layout and design-hierarchy decisions across distinct page types, from high-value and vehicle landing pages to long-form content, matching structure to each page's goal for readability, conversion, and performance.
- Collaborated with SEO and Content teams to translate campaign objectives into technical implementations, delivering consistently across multiple concurrent client accounts.

AI Testing Engineer (Freelance) | Scale.ai | Remote Aug 2023 - Dec 2023

- Improved LLM-generated JavaScript test accuracy by 40%+ against structured rubric scores by authoring complex Playwright-style automation scenarios and evaluating edge-case handling across hundreds of model outputs.
- Reduced recurring model failure patterns by synthesizing quality trends across 500+ responses and building a repeatable feedback framework that functioned as a technical QA pipeline, directly influencing model retraining cycles.
- Designed algorithm and system-design scenarios targeting DOM manipulation, async behavior, and CSS rendering edge cases, accelerating benchmark coverage of real-world frontend engineering tasks.

Director of Warehouse Operations | Snag Delivery LLC | Santa Barbara, CA Dec 2020 - Dec 2022

- Redesigned end-to-end operational procedures and led cross-functional coordination, cutting order-to-delivery time by 16% and increasing customer satisfaction scores by 45%.

PROJECTS

Coindex | *React/Redux · Flask · PostgreSQL · Chart.js · AWS S3*

- Engineered a normalized Redux store with O(1) state complexity and integrated Chart.js for real-time crypto portfolio dashboards with per-asset performance tracking.
- Applied React Context to eliminate prop-drilling across deeply nested components and built custom auth with password hashing to secure sensitive financial data.

Nope (Yelp Clone) | *React/Redux · Flask · Google Maps API · PostgreSQL*

- Built multi-parameter search via Google Maps API (name, location, category) and implemented Bcrypt auth and a DOM-based photo carousel for business discovery.

AirNbN (Airbnb Clone) | *React/Redux · Flask · PostgreSQL · AWS S3*

- Delivered a full-stack rental marketplace with React virtual DOM, Express API routing, AWS S3 media storage, and a customized React-Date-Range integration for real-time availability.

EDUCATION

App Academy, Full Stack Web Development Dec 2022 - Jun 2023

UC Santa Barbara, B.A. Economics, Technology Management Program (TMP) 2017 - 2021
