SAMUEL SUH

WEB DEVELOPER | FRONT-END, CMS & TECHNICAL SEO

San Jose, CA • 408-206-3559 • suhvivor24@gmail.com • samsuhhh.github.io • LinkedIn • GitHub

SUMMARY

Web developer whose work has always sat at the boundary between engineering and everyone else. Over two years as the client-facing technical contact across a 30+ account portfolio at a digital agency, building and maintaining live properties on 7+ CMS platforms and owning technical SEO, accessibility, and release quality. Before that, promoted from driver to Director of Operations within two months at a delivery startup, hiring 20 to 25 people and running peak shift crews. Comfortable explaining a tradeoff to an engineer and to the person paying for it in the same afternoon.

CORE SKILLS

Development: JavaScript (ES6+), TypeScript, React, Next.js, HTML5, CSS3, Node, SQL, REST APIs and Integrations, Cloudflare Workers, Git and Pull Request Workflows, CI/CD (GitHub Actions), Jest, React Testing Library, Playwright, Chrome DevTools

CMS & Web Delivery: WordPress, Adobe Experience Manager, Ansira, Dealer.com, DealerInspire, DealerOn, Apollo, template and component management, content migrations, responsive and cross-browser implementation, design files to production pages, campaign and landing page builds

Technical SEO & Quality: Schema markup and JSON-LD, structured data, crawlability and robots configuration, canonical tags, XML sitemaps, 301/404 redirect strategy, internal linking, page speed optimization, WCAG accessibility, FTC advertising disclosure compliance, Google Search Console, Ahrefs

Client-Facing & Process: Technical point of contact across concurrent accounts, discovery call participation, requirements translation for non-technical stakeholders, escalation management, account retention, SOP authoring, technical onboarding and mentorship, Jira, Asana, ClickUp, Salesforce, Slack, Agile/SCRUM | Conversational Korean, native speaker

PROFESSIONAL EXPERIENCE

Junior Web Developer | Honest Digital (Digital Agency) | Remote Mar 2024 - Jun 2026

- Built and maintained 30+ live production properties across 7+ CMS platforms, owning day-to-day development, release quality control, and the technical relationship with client stakeholders.
- Served as the client-facing technical contact from first request through launch, sitting in on discovery calls as the technical voice and translating findings and tradeoffs for non-technical audiences.
- Delivered technical SEO across the portfolio including schema markup, structured data, crawlability and robots configuration, canonical tags, sitemaps, redirects, and internal linking.
- Designed and built a custom map module rendering client service locations as linked cards and map pins, deployed as a reusable component across multiple sites.
- Diagnosed a systemic redirect workflow failure producing silent errors across the client base, traced the root cause, and authored the standardized procedure the team adopted, cutting resolution time by roughly 25%.
- Onboarded and mentored two developers through their ramp, and co-authored three SOPs adopted across the department.

AI Testing Engineer | Scale.ai | Remote Aug 2023 - Mar 2024

- Evaluated machine-generated JavaScript against structured rubric criteria across hundreds of cases, improving measured accuracy by 40% or more through systematic edge-case analysis.
- Synthesized failure patterns across 500+ documented cases into a repeatable feedback framework, and authored automated test scenarios in Playwright used as reference implementations.

Director of Warehouse Operations | Snag Delivery LLC | Santa Barbara, CA Dec 2020 - Dec 2022

- Promoted from driver to Director within two months of joining. Hired 20 to 25 associates, supervised peak shift crews, and owned scheduling, coaching, and performance conversations.
- Rebuilt the order to delivery workflow after tracing a routing defect in the dispatch software and a role structure problem on the floor, cutting cycle time by 16%, raising customer satisfaction 45%, and running the same volume with fewer people on shift.

PROJECTS

CareerOS | *Next.js · TypeScript · Cloudflare Workers · D1 · Jest/RTL · GitHub Actions*

- Self-taught the stack and shipped an application in daily production use: REST API over a 7-table relational schema, runtime validation at every boundary, 49 tests across two frameworks, and a pipeline that blocks deployment on a red build. Source on GitHub.

EDUCATION

UC Santa Barbara, B.A. Economics, Technology Management Program (TMP) Certificate 2017 - 2021

App Academy, Full Stack Web Development Dec 2022 - Jun 2023
