TECHNICAL SKILLS

Frontend: React, Redux, JavaScript (ES6+), HTML5, CSS3, Chart.js, Responsive Design, DOM Manipulation

Backend & Tools: Node.js, Express, Flask, PostgreSQL, REST APIs, AWS S3, Docker, Git, Playwright, Postman, Python, SQL

Testing & QA: Test Automation, Automated Test Maintenance, Chrome DevTools, Debugging, Failure Reproduction, Cross-browser Compatibility

Practices: Agile/SCRUM, SEO Optimization, Multi-CMS Management, Code Review, Mentorship | Fluent Korean

PROFESSIONAL EXPERIENCE

Junior Web Developer | Honest Digital | Remote

Mar 2024 – May 2026

- Reduced 301/404 error resolution time by ~30% across 30+ client properties, as measured by internal audit cycle time, by identifying a systemic gap in redirect workflows and engineering a standardized debugging process adopted team-wide.
- Improved cross-browser compatibility and QA coverage for 30+ production sites, as measured by reduction in client-reported UI regressions, by using Chrome DevTools to reproduce, isolate, and resolve failures before deployment.
- Standardized onboarding for new developers by building internal documentation and hands-on mentorship around CMS tools, debugging protocols, and cross-browser testing practices — reducing senior staff bottlenecks on a growing remote team.
- Collaborated cross-functionally with SEO and Content teams to translate campaign objectives into technical implementations, consistently delivering across multiple concurrent client accounts.

AI Testing Engineer (Freelance) | Scale.ai | Remote

Aug 2023 – Dec 2023

- Improved LLM-generated JavaScript test accuracy by 40%+ as measured by structured rubric scores, by authoring complex Playwright-style automation scenarios and evaluating edge case handling across hundreds of model outputs.
- Reduced recurring model failure patterns by synthesizing quality trends across 500+ responses, by building a repeatable feedback framework that functioned as a technical QA pipeline — directly influencing model retraining cycles.
- Accelerated benchmark coverage of real-world frontend engineering tasks, as measured by prompt reuse across multiple evaluation cycles, by designing algorithm and system design scenarios targeting DOM manipulation, async behavior, and CSS rendering edge cases.

Director of Warehouse Operations | Snag Delivery LLC | Santa Barbara, CA

Dec 2020 – Dec 2022

- Redesigned end-to-end operational procedures, cutting order-to-delivery time by 16% and increasing customer satisfaction scores by 45% as measured by customer surveys.
 - Reduced on-site headcount by 33% through process restructuring without sacrificing throughput or service quality.
 - Defined and enforced new team standards, leading cross-functional coordination across warehouse and delivery staff to ensure consistent execution.
-

PROJECTS

Coinindex | React/Redux · Flask · PostgreSQL · Chart.js · AWS S3

- Engineered a normalized Redux store with O(1) state complexity; integrated Chart.js for real-time crypto portfolio dashboards with per-asset performance tracking.
- Used React Context to eliminate prop-drilling across deeply nested components; built custom auth with password hashing to secure sensitive financial data.

Nope (Yelp Clone) | React/Redux · Flask · Google Maps API · PostgreSQL

- Built multi-parameter search via Google Maps API (name, location, category); implemented Bcrypt auth and a DOM-based photo carousel for an engaging business discovery experience.

AirNbN (Airbnb Clone) | React/Redux · Flask · PostgreSQL · AWS S3

- Delivered full-stack rental marketplace with React virtual DOM, Express API routing, AWS S3 media storage, and a customized React-Date-Range integration for real-time availability display.

EDUCATION

App Academy — Full Stack Web Development

Dec 2022 – Jun 2023

UC Santa Barbara — B.A. Economics, Technology Management Program (TMP)

2017 – 2022
